

Published since 1959—**for 53 years!**—TEST is

THE magazine for testing professionals, specifically devoted to physical and mechanical testing and environmental simulation.

TEST
Engineering & Management

Feb./March 2012 issue:

Published mid-February

Editorial deadline: January 15

Annual Buyers' Guide:

Widely used print *and* online resource for physical and mechanical testing and environmental simulation equipment and services for such industries as automotive, consumer, space and aerospace. Listings free; annual updates.

+Practical testing insights:

A mix of industry-wide testing advice and wisdom, suitable for an issue readers typically keep all year as a reference.

Regular testing columns:

Thought-provoking analysis of *Automotive, Accelerated, Dynamics, Reliability, Hands-On & Practical Testing* areas.

TEST
Engineering & Management

April/May 2012 issue:

Published mid-April

Editorial deadline: March 15

MIL-STD-810G dynamics test issues:

Focus on aspects of the essential MIL-STD-810G's dynamics testing specifications that need further discussion and/or clarification, through short articles and commentaries.

+HEST ATM, Expo, & bonus distribution:

Advance highlights of ESTECH 2012's ATM, testing-related sessions, and exhibitors—plus bonus distribution of this issue (and others) from TEST's booth at the Expo!

Regular testing columns:

Thought-provoking analysis of *Automotive, Accelerated, Dynamics, Reliability, Hands-On & Practical Testing* areas.

TEST
Engineering & Management

June/July 2012 issue:

Published mid-June

Editorial deadline: May 15

Shock & vibration testing:

Focus on state-of-the-art test techniques and information in dynamics testing—testing used and required for virtually all products—through technical articles and features. Editorial items may range across any and all aspects of this interesting area. Also included: **Shock & Vibration Product Round-Up**—TEST's ever-useful and extremely reader-pleasing annual feature.

Regular testing columns:

Thought-provoking analysis of *Automotive, Accelerated, Dynamics, Reliability, Hands-On & Practical Testing* areas.

TEST
Engineering & Management

Aug./Sept. 2012 issue:

Published mid-August

Editorial deadline: July 16

MIL-STD-810G climatics test issues:

Focus on climatics aspects of the MIL-STD-810G's testing specifications that need further discussion and/or clarification, through short articles and commentaries.

+Climatics testing:

We'll also look at other current climatics testing topics, such as what we've learned from the military's recent experience in hot/dry/dusty places; and test chamber state of the art.

Regular testing columns:

Thought-provoking analysis of *Automotive, Accelerated, Dynamics, Reliability, Hands-On & Practical Testing* areas.

TEST
Engineering & Management

Oct./Nov. 2012 issue:

Published mid-October

Editorial deadline: September 17

Test lab management:

Focus on such test lab management questions as lab organization, scheduling, planning, reports; administration of lab testing activities, use of computers, the internet, etc.; test equipment repairs and maintenance; personnel requirements; training needs on-the-job and through classes; lab management differences—or similarities—among government, commercial, small, and large test labs.

Regular testing columns:

Thought-provoking analysis of *Automotive, Accelerated, Dynamics, Reliability, Hands-On & Practical Testing* areas.

TEST
Engineering & Management

Dec./Jan. 2012-'13 issue:

Published mid-December

Editorial deadline: November 15

Package testing:

Focus on the current state of package testing in relation to changes in packaging materials in recent years, including green materials requirements; state-of-the-art package testing equipment; current testing standards; the shipping environment; new data acquisition tools. We'll offer technical articles, features, and/or columns, with input from several different package testing perspectives.

Regular testing columns:

Thought-provoking analysis of *Automotive, Accelerated, Dynamics, Reliability, Hands-On & Practical Testing* areas.

ARTICLES: We accept unsolicited manuscripts over technical bylines, 1,500 to 2,500 words, with (preferably) black-and-white line diagrams and/or photo illustrations. Must deal with mechanical testing and/or environmental simulation or related topics. Article specification sheet available.

We recommend you first call or e-mail the editor, Eve Mattingley-Hannigan, to determine suitability of your proposed manuscript **BEFORE** you invest a lot of preparation time.

E-mail: eve@testmagazine.biz
Web: www.testmagazine.biz

COVER PHOTO: We use a full-color photo five times a year (all issues except Feb./March). Must be interesting visually, preferably dramatic, deal with mechanical testing and/or environmental simulation, be relevant to a specific issue's focus.

Shoot your photo in a vertical format, please!

Call or e-mail the editor in advance about photo subject and format details. Submit electronically. **Must** meet our criteria: **Call or e-mail FIRST!**

Phone: (510) 839-0909 • **FAX:** (510) 839-2950

REGULAR DEPARTMENT COVERAGE:

- New Products & Literature
- Coming Events
- TEST Reports (*industry news*)
- Letters to the Editor
- Books on Display

Mail:

3756 Grand Avenue, Suite 205
Oakland, CA 94610-1545

REGULAR SUBJECTS, COLUMNS, & AUTHORS:

- Practical Reliability Testing
by Dave Gibbons & others
- General Testing Wisdom
by a variety of authors
- Accelerated Testing
by Chris Peterson & others
- Vibration Testing
by Wayne Tustin & others
- Automotive Testing
by a variety of authors
